

How do I learn more?

Our helpful Patient Enquiries team are on hand to provide you with all the information that you may require.

You can contact your local clinic for a chat without any obligation.

To establish whether we have a clinical trial suited to you we will guide you through a brief medical questionnaire over the telephone. If there is a suitable study, we will provide you with more information and offer you the chance to visit your local MAC Clinic for an informal chat with a member of the clinical team.

Information for Caregivers...

In certain circumstances (such as patients with dementia) the decision to participate in research will be made or influenced by a family member or caregiver. We fully appreciate the sensitive nature of such a decision however you can be assured that our teams will fully support you through the process with compassion and respect.

Stockton-on-Tees, TS17 6EW

Clinical Research What's in it for me?

About us

MAC Clinical Research, established in 1988, has been successfully conducting **clinical trials** and providing **memory assessments** for over 25 years. With comfortable and modern clinics MAC is leading developer of new medicines for a wide range of conditions.

Your wellbeing is always our first priority

Our skilled medical teams will provide you with the highest standards of care available. Clinical trials is a strictly regulated industry and MAC work to the standards referred to as GCP (Good Clinical Practice).

Having recently attended MAC for a clinical trial, I have to say what a pleasure it was. The trial ran for several weeks and it was like visiting friends on a weekly basis. All the staff from the Receptionist to the Clinicians and the Doctor were really great and most caring. At the same time they were very professional and very thorough, so as to make sure that the trial medication was not affecting my health in any adverse way. I cannot recommend them highly enough.

Cliff, Blackpool - 2018

Couldn't have asked for any better support or a better first clinical trial. Really supportive, helped me cope with dark and stressful issues in my life. Hope to come back again in the future. I will miss my visits.

Kieran, Leeds - 2018

What is a clinical trial?

There would be no new or improved medications without clinical research. All medications that we use, even familiar ones like paracetamol have all gone through the clinical trial process.

How can I benefit from a clinical trial?

Volunteers play a vital role in clinical trials. Taking part is FREE and you may benefit by:

- Receiving a payment for taking part (depending on the study criteria) and having you travel costs reimbursed.
- Having health checks and assessments that are beyond the normal standard of care
- Accessing professionals who are experts in the field
- Having the satisfaction of knowing that you are helping future generations
- Being part of a team that is passionate about developing better treatments to improve the lives of those living with an illness.
